

Cloud Service Models	IAAS	PAAS	SAAS
Provider	<p>The Provider has complete control over the Hardware layer and has Admin Control over the Hypervisor. So, we can assume that the Provider has control over Datacenter Configuration, Host Configuration.</p>	<p>The Provider has access over the Hardware, Virtualization. So we can assume that the provider has control over DataCenter, Host & VMs</p>	<p>The Provider has control over the whole environment. So we can assume that the provider has control over DataCenter, Hosts, VMs and Cloudlets</p>
Customer	<p>The Customer has control Virtualization and can make request to Hypervisor. So we can assume that Customer has access over VM & Cloudlet and it can specify number of host it needs.</p>	<p>The Customer has control over the application. So we can assume that Customer can specify the Cloudlet characteristics and Number of VMs</p>	<p>The Customer just uses the services. So we can assume that the customer can just make a request for number of cloudlets.</p>
